

iCtP™ PlateWriter™ Series Consumables and Accessories

iPlates™

The PlateWriter™ iPlates™ are aluminum plates with no thermal or light sensitive coatings that are unique to Glunz & Jensen.

iPlates are available in both standard and custom sizes and in gauges from 0.15 - 0.30 mm (0.006-0.012").

iPlate™ Cleaner

A mild and fast acting cleaner for iPlates™ that powers through dried ink and gum without damage to the image. iPlate Cleaner leaves a water receptive film on the non-image area, ensuring fast start-up.

i-Finisher™

The i-Finisher desensitises and protects the background of your plates. It is designed for use with the iCtP™ automated finishing unit after imaging and as a hand gum for storage and protection of plates between printing jobs.

Pressroom Options

Illuminated Magnifier

With 10x magnification and a built-in LED light, the illuminated magnifier allows you to check the quality of your plates before you send them to press.

Deletion Pens

Deletion pens allow you to make small corrections and remove minor flaws on your imaged plates, without having to re-image a new plate - saving you time and resources.

Liquid Dot™

The PlateWriter™ Series uses a special ink called Liquid Dot™ to image the plates. The ink is cured in the integrated finishing unit after imaging to fix the image to the plate. Liquid Dot™ is a unique formula for the PlateWriter and no other ink works.

PlateWriter Consumables

Maintenance Fluid

The printer uses a maintenance fluid in non-imaging channels to keep the Liquid Dot™ related pipes and parts clean and thus maintain excellent image quality.

RIP Add-ons

ColorPro

Building on the industry leading software options, ColorPro provides excellent colour process control, giving accurate colour reproduction for a wide range of workflows. It provides full support for industry standard ICC profiles (including device link profiles), avoiding dependence on the generic, system-level colour management of the operating system.

i-Position™

Designed for PDF and PS workflows, i-Position™ includes comprehensive imposing tools for iCtP™ users enabling automated booklet and magazine cration. i-Position will also step and repeat smaller jobs, allowing maximum use of press sheets and reduced time on press.

A free 25-day trial version of i-Position is available exclusively from Glunz & Jensen.

TrapPro

Trapping introduces areas of colour into colour separations to obscure potential register errors when printed. TrapPro automates this process and provides a solution which removes the guess work, improving both the quality and consistency of printed output.

Harlequin CIP3 Plug-in

The Harlequin CIP3 (Co-operation in Pre-Press, Press and Post-Press) Output Plug-in permits users to create Print Production Format (PPF) files containing comprehensive information about print jobs, including administrative data, information about inks, and preview images.
